In an era of heightened scrutiny of environmental liabilities facing many companies, it is no longer prudent for manufacturers or distributors to assess their general casualty and environmental liabilities independently. Products that are seemingly innocuous, such as drywall have turned out to have severe pollution potential.

Further, trying to structure a standard Commercial General Liability (CGL) Policy to cover the broad range of traditional (products, premises) and pollution exposures faced by this class of business is at best, complex, time-consuming and fraught with coverage pitfalls created by the interaction amongst multiple policies. Each policy is highly customizable and contains many broadened features tailored to the manufacturing and distribution industry.

**Coverage 1: ISO - Primary General Liability Coverage +**
